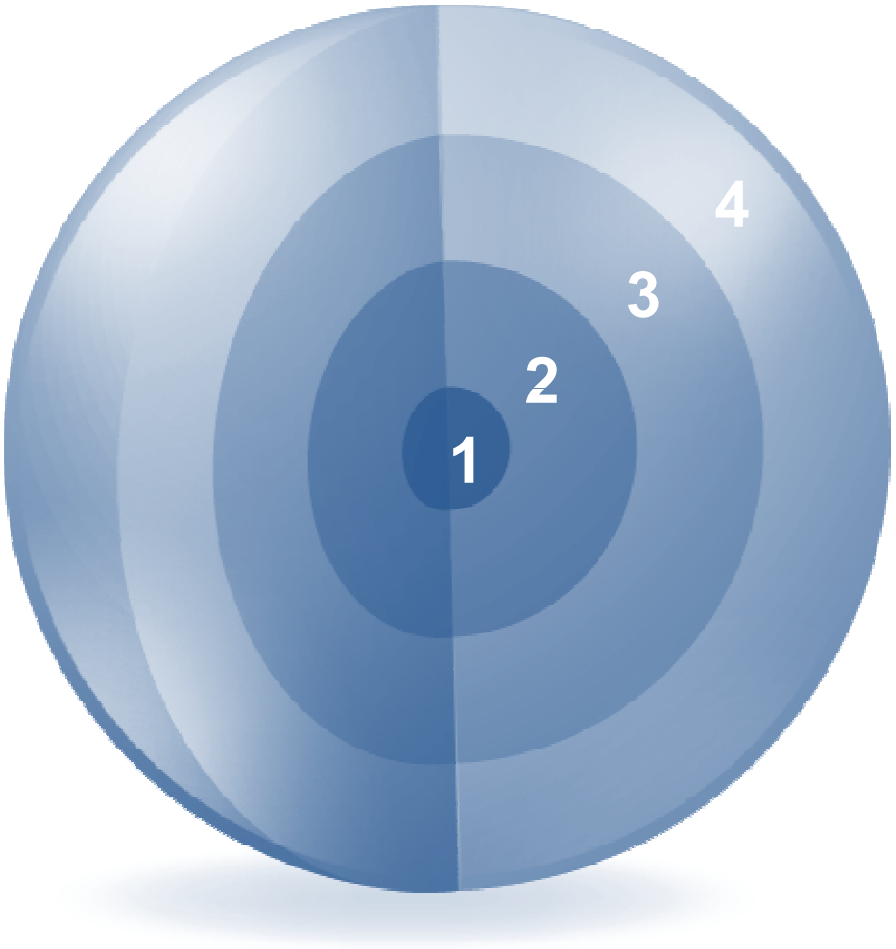
Lesson 5

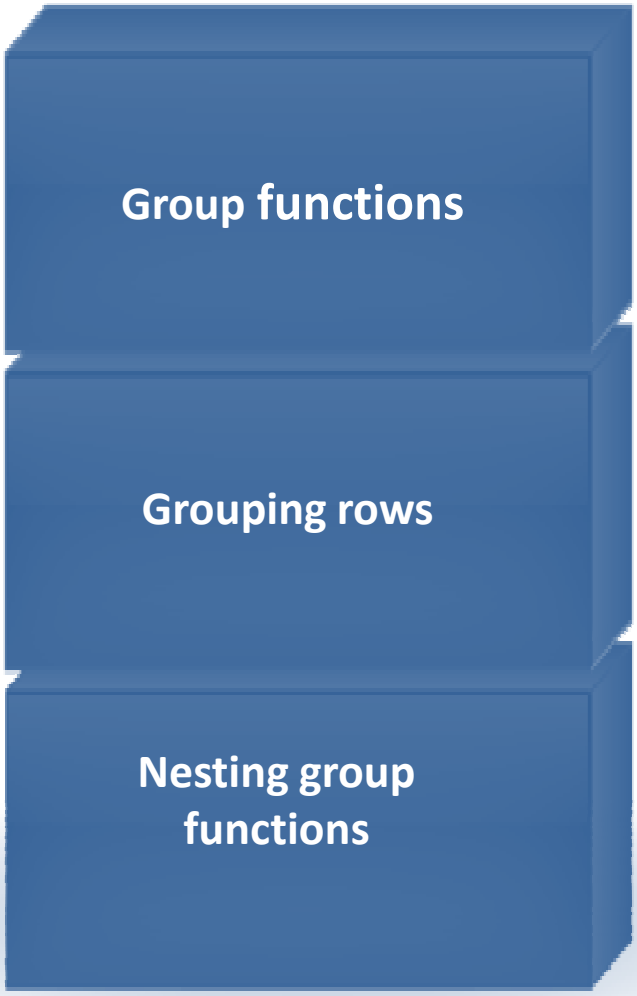
Reporting Aggregated Data Using the Group Functions

What You will learn at the end of the Session?



1. **Identify the available group functions**
2. **Describe the use of group functions.**
3. **Group data by using the GROUP BY clause**
4. **Include or exclude grouped rows by using the HAVING clause**

Session Plan



1. **Group functions:**
   - **Types and syntax**
   - **Use AVG, SUM, MIN, MAX, COUNT**
   - **Use the DISTINCT keyword within group functions**
   - **NULL values in a group function**

2. **Grouping rows:**
   GROUP BY clause
   HAVING clause

3. **Nesting group functions**

What Are Group Functions?

- **Group functions operate on sets of rows to give one result per group.**

EMPLOYEES

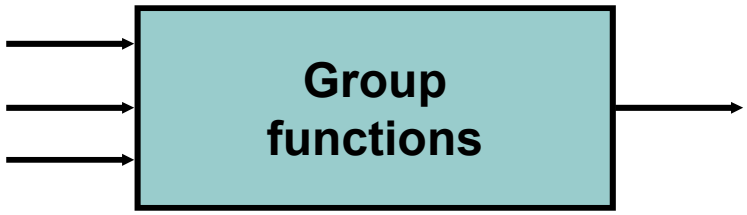
	DEPARTMENT_ID	SALARY
1	10	4400
2	20	13000
3	20	6000
4	110	12000
5	110	8300
6	90	24000
7	90	17000
8	90	17000
9	60	9000
10	60	6000
...		
18	80	11000
19	80	8600
20	(null)	7000

Maximum salary in EMPLOYEES table

MAX(SALARY)
24000

Types of Group Functions

- AVG
- COUNT
- MAX
- MIN
- STDDEV
- SUM
- VARIANCE

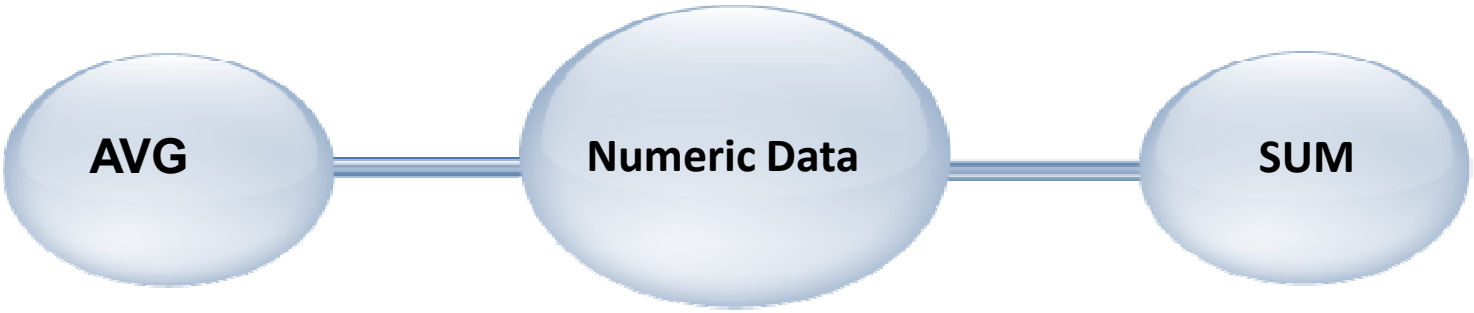


Group Functions: Syntax

```
SELECT      group_function(column), ...
FROM        table
[WHERE      condition]
[ORDER BY   column];
```

Using the AVG and SUM Functions

- You can use AVG and SUM for numeric data.

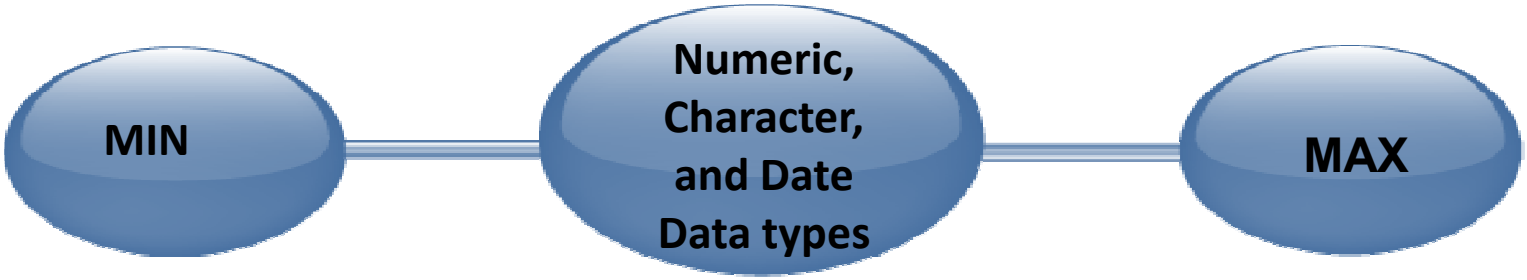


```
SELECT  AVG(order_total),  MAX(order_total),
        MIN (order_total), SUM( order_total)
FROM    orders;
```

	AVG(ORDER_TOTAL)	MAX(ORDER_TOTAL)	MIN(ORDER_TOTAL)	SUM(ORDER_TOTAL)
1	44628.44125	295892	5451	3570275.3

Using the MIN and MAX Functions

- You can use MIN and MAX for numeric, character, and date data types.



```
SELECT  MIN(to_char(order_date, 'fmDD Month YYYY'))
AS "Min Order Date",
MAX(to_char(order_date, 'fmDD Month YYYY'))
AS "Max Order Date"
FROM   orders ;
```

	Min Order Date	Max Order Date
1	1 November 1999	9 January 2000

Using the COUNT Function

- **COUNT(*) returns the number of rows in a table:**

1

```
SELECT  count(*)
FROM    inventories
WHERE   warehouse_id = 8;
```

	COUNT(*)
1	186

- **COUNT(*expr*) returns the number of rows with non-null values for *expr*:**

2

```
SELECT  COUNT(sales_rep_id)
FROM    orders
WHERE   order_status <=3;
```

	COUNT(SALES_REP_ID)
1	19

Creating Groups of Data

Creating Groups of Data: GROUP BY Clause Syntax

- **You can divide rows in a table into smaller groups by using the GROUP BY clause.**

```
SELECT     column, group_function(column)
FROM       table
[WHERE     condition]
[GROUP BY  group_by_expression]
[ORDER BY  column];
```

Using the GROUP BY Clause

- **All the columns in the SELECT list that are not in group functions must be in the GROUP BY clause.**

```
SELECT   warehouse_id, AVG(quantity_on_hand)
FROM   inventories
GROUP BY   warehouse_id ;
```

	WAREHOUSE_ID	AVG(QUANTITY_ON_HAND)
1	1	152.30555555555555555555555555555555555556

9	9	57.4765625

Using the GROUP BY Clause

- The GROUP BY column does not have to be in the SELECT list.

```
SELECT   AVG(order_total)
FROM   orders
GROUP BY   order_status ;
```

	AVG(ORDER_TOTAL)
1	36613.68333333333333333333333333333333

Using the GROUP BY Clause on Multiple Columns

```
SELECT   order_mode, order_status, sum(order_total)
FROM   orders
WHERE   order_id BETWEEN 2300 AND 2500
GROUP   BY order_mode, order_status
ORDER   BY order_mode, order_status ;

Illegal Queries Using Group Functions

- **Any column or expression in the SELECT list that is not an aggregate function must be in the GROUP BY clause:**

```
SELECT department_id, COUNT(last_name)
FROM   employees;
```

ORA-00937: not a single-group group function
00937. 00000 - "not a single-group group function"

A GROUP BY clause must be added to count the last names for each department_id.

```
SELECT department_id, job_id, COUNT(last_name)
FROM   employees
GROUP BY department_id;
```

ORA-00979: not a GROUP BY expression
00979. 00000 - "not a GROUP BY expression"

Either add job_id in the GROUP BY or remove the job_id column from the SELECT list.

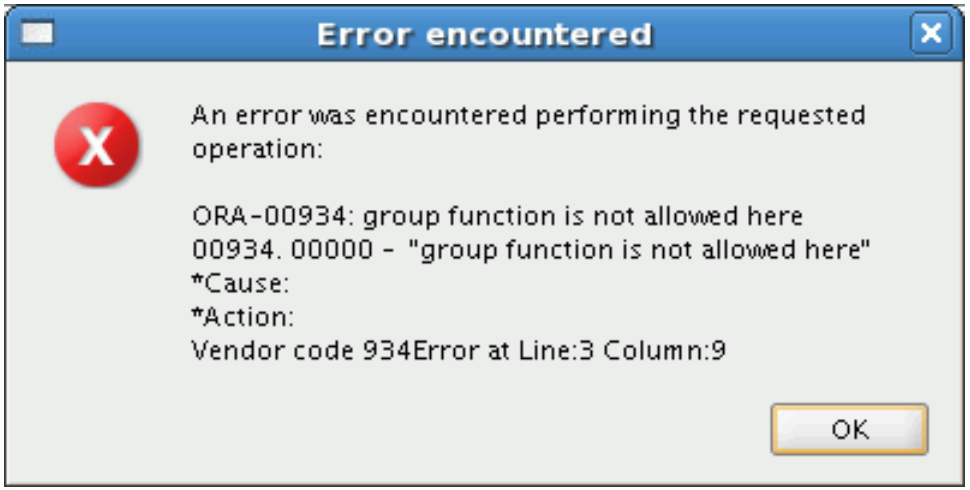
Illegal Queries Using Group Functions

You cannot use the WHERE clause to restrict groups.

You use the HAVING clause to restrict groups.

You cannot use group functions in the WHERE clause.

```
SELECT    department_id, AVG(salary)
FROM      employees
WHERE     AVG(salary) > 8000
GROUP BY department_id;
```



Cannot use the WHERE clause to restrict groups

Restricting Group Results

EMPLOYEES

1	20	13000
2	90	24000
3	110	12000
4	80	11000

Restricting Group Results with the HAVING Clause

- When you use the HAVING clause, the Oracle server restricts groups as follows:

  Rows are grouped.

  The group function is applied.

  Groups matching the HAVING clause are displayed.

```
SELECT     column, group_function
FROM       table
[WHERE     condition]
[GROUP BY  group_by_expression]
[HAVING    group_condition]
[ORDER BY  column];
```

Using the `HAVING` Clause

```
SELECT   warehouse_id,  AVG(quantity_on_hand)
FROM   inventories
GROUP BY   warehouse_id
HAVING  MAX  (quantity_on_hand) > 130 ;
```

	WAREHOUSE_ID	AVG(QUANTITY_ON_HAND)

ORACLE

Using the HAVING Clause

```
SELECT    job_id, SUM(salary) PAYROLL
FROM      employees
WHERE     job_id NOT LIKE '%REP%'
GROUP BY job_id
HAVING    SUM(salary) > 13000
ORDER BY SUM(salary);
```
